No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene. The promoter region was amplified by FOR from leucocyte DNA of over 50 individuals, and sequenced.

By PCR from leucocyte DNA of over 50 individuals, and sequenced.

By Previously unknown single nucleotide polymorphisms (SNP) were identified. These were at: base 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature), where the SNP was C to G occurring at an estimated frequency of approximately 20% in the population, and resulting in increased enzyme activity.

CC G occurring at an estimated frequency of approximately 20% frequency, neutral function; position 620 (-1000), G to A, approximately 20% frequency, neutral function; position 620 (-1000), G to A, approximately 30% frequency, unknown function; Dosition 940 (-680), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, approximately 30% frequency, unknown function; 1255 (-365), C G to A, rare, unknown function; and 1298 (-322), T to C, rare, c associated with lower metabolic ratios, and a molecular variant complexed with lower metabolic ratios, and a molecular variant complexed with intereased capacity for clearance of Cyp2D6 substrates of antidepressant, selective serotonin reuptake inhibitor, neutroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a mutation in the Cyp2D6 promoter. The strong association of the common C to G mutation at C1884 bp with increased enzyme activity significantly improves the metabolisers and therefore allow menaholisers and therefore allow menaholisers and therefore allow menaholisers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A polynucleotide capable of hybridizing to CYP2D6 promoter useful for the optimization of drug therapies using substrates of cytochrome P-450
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   metabolizers and therefore allow quantitative predictions to be made on in vivo drug metabolism capacity, thus providing a very potent tool for improving the therapy of diseases with drugs that are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human cytochrome P450 CYP2D6 gene promoter (G mutation at -1584 bp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antagonist, tricyclic antidepressant, selective servicin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a mutation in the CYP2D6 promoter. The novel variant forms of the GVP2D6 gene provided by the invention provide the potential for the development of a pharmacodynamic profile of drugs for a given patient. The finding and characterization of variations in the CYP2D6 gene, and diagnostic tests for the discrimination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene, which includes G at position 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature). The presence of C at position -1584 bp is a marker for low enzyme activity, whereas there is strong association of G at position -1584 bp with increased enzyme activity. The C to G single nucleotide polymorphism occurs in approximately 20% of the population. The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of CYP2D6 substrates (antiarrhythmic, beta adrenergic receptor
                                                                                                ;

The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic ability to metabolise certain drugs. The present sequence is human CYP2D6 gene 5' flanking region containing polymorphic sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5° fianking region of cytochrome P450 2D6 (CYP2D5) gene. CYP2D6 enzymes are involved in the metabolism of fiany different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, sprobes in sequence determination methods based on mismatches, as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; cytochrome P450 2D6; CYP2D6; enzyme; detection; xenoblotic; ligase-based sequenced determination; drug metabolism; chromosome 22;
                                                                                                                                                                                                                                                                                                                                                              Gaps

```

```
The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosting, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                   Probe #19003 for gene expression analysis in human heart cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilopsy and cancers. The present sequence is one of the probes of the

```
probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for gene expression analysis in human cervical cell sample.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful
                                                                                                                                                                                                                       printed
                                                                                                                        (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                           present invention relates to human single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Probe #25316 used to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                 Gaps

cc the cukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exors from genomic sequence by the method above und (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon microarrays having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes of some as should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the probes/open reading frames (ORF). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung disease.

CCOPD), interstitual lung disease (ILD), familial idiopathic pulmonary disease, such an analysis, pulmonary pulsatory sclerosis, Gaucher's disease, CC pulmonary alveolar proteinosis, Karagener syndrome, sarcoidosis, pulmonary alveolar proteinosis, Karagener syndrome, ilibrocystic pulmonary alveolar proteinosis, Karagener syndrome, sarcoidosis, pulmonary alveolar proteinosis, Karagener syndrome, ilibrocystic pulmonary alveolar proteinosis, Karagener syndrome, sarcoidosis, pulmonary data for this patent did not form part of the printed specification, but was obtained in electronic for the printed specification, but was obtained in electronic for the present sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó

measuring human gene expression in a sample derived from human heart. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging,
                                                   measuring human gene expression in a sample derived from human foctal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the

                                                                                                                                                                ó
monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                  Gaps

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.

/site_1: Row RI: Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NHHM, pregnant uterus NbHPU, and fetal heart NbHH19W) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 260232-265223, 340488-3489479. and 484488-489479."

UI-E-EJO is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an ECOR I adaptor, digested with Not I; and cloned directionally into pT773-pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dr)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAGA, eye anterior segment, AATGCGGAT; optic nerve, CGATTAGGGA, eye anterior segment, AATGCGGAT; optic nerve, CGATTAGGGA, etclina, CGGCS, Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ALYGAUB2 536 bp mRNA linear EST 09-MAR-2000 Wt27a05.xl NCI_CGAP_Ut1 Homo sapiens cDNA clone IMAGE:2508656 3' similar to TR:070210 070210 CHONDROADHERIN. ;, mRNA sequence.
